

ARAMION Patent-Pending Architecture Portfolio

Public summary of the ARAMION patent-pending architecture portfolio. This document contains high-level non-confidential descriptions only.

Detailed claims, specifications, prosecution materials, implementation details, payment records, and private filing materials are not publicly distributed through this document. Additional materials may be reviewed under NDA for qualified technical, legal, strategic, or investor due diligence.

Patent Package 01

Secure Modular Infrastructure

U.S. Provisional Application 63/861,308

Filed: August 11, 2025

Focus areas include: modular AI-based content protection, blockchain-compatible records, post-quantum cryptographic support, offline verification, content identification, and modular media-governance infrastructure.

The package describes a foundational modular infrastructure layer for secure digital content handling and ecosystem expansion.

Patent Package 02

Authorship, Lineage and Monetization Governance

U.S. Provisional Application 64/033,791

Filed: April 9, 2026

Focus areas include: authorship association, content lineage, relationship structures, rights workflows, claim handling, offline synchronization, conceptual identifiers, and monetization governance.

The package expands the governance layer for content relationships, lineage-aware processing, and monetization-related system logic.

Patent Package 03

Non-bypassable Core-first Governance Architecture

U.S. Non-Provisional Utility Application 19/651,814

Received: April 23, 2026

Focus areas include: mandatory processing pipeline, non-bypassable Core processing, modular integration hub, anti-bypass enforcement, extension-module governance, and canonical lineage authority.

The package further organizes and consolidates the Core-first architecture for trusted digital content governance workflows.

Architecture Positioning

The ARAMION architecture portfolio is structured as a multi-layer system:

- Layer 1 вЂ” secure modular infrastructure
- Layer 2 вЂ” lineage and monetization governance
- Layer 3 вЂ” Core-first authority and anti-bypass enforcement

The packages are separate filings covering different aspects of the broader ARAMION ecosystem.

Public Claim Boundaries

The ARAMION system may be described as:

- patent-pending architecture
- patent-pending infrastructure
- patent-pending governance system
- Core-first governance architecture

This document does not represent: granted patent status, legal certification, regulatory approval, or guaranteed enforcement rights.
